

## Additional Landfill Liquids Management Infrastructure Installed

February 23, 2018

**SYLMAR, Calif. (Feb. 23, 2018)** – As we've previously reported, over the past year the Sunshine Canyon Landfill team has made significant enhancements to the landfill gas collection system in an effort to more effectively collect and control landfill gas. To help maximize gas collection, our team manages landfill liquids to prevent their impact on the gas collection system.

A key component of liquids management is ensuring the pipes through which landfill liquids flow are clear of any debris. This year, we have installed seven automatic de-scalers in the landfill liquids management network. These de-scalers dissolve mineral deposits to avoid buildup in the network, maximize liquids flow and decrease the frequency of maintenance events. We will monitor their effectiveness and install additional de-scalers where necessary.
