

Landfill Gas System Enhancements Progressing

February 16, 2018

SYLMAR, Calif. (Feb. 16, 2018) – Over the past few weeks, the Sunshine Canyon Landfill team has made continued progress on the first landfill gas system enhancement of the year. Since the project launched last month, we have installed eight vertical landfill gas wells and have attached permanent vacuum lines to begin collecting landfill gas. Additionally, we have installed pumps in four of the gas wells and are already extracting perched landfill liquids that would otherwise impede proper gas collection.

Along with vertical wells and pumps, we have installed horizontal landfill gas collectors in one of the current active waste cells to further promote landfill gas collection. This enhancement provides an additional vacuum source to extract landfill gas, and we anticipate completing this phase of the project next week.
