

Spring Has Sprung at Sunshine Canyon Landfill

March 30, 2018

SYLMAR, Calif. (March 30, 2018) – In February, the Sunshine Canyon Landfill team reported that the vegetative cover we planted over 57 acres of the Landfill was taking root. Today, the vegetation canvasses the eastern slope of the Landfill, and has even begun sprouting small spring flowers. We will continue routine maintenance throughout the spring and summer, and once mature, the vegetation will help prevent erosion and soil thinning, and act as a natural bio-filter.
